

AGRICULTURAL SOLUTIONS FOR THERMOPLASTICS

THE ADVANTAGES OF THERMOPLASTICS

- Plastics are light weight, especially when compared to metals.
- Durable and corrosion resistant.
- Optimum load capacity with minimum wear.
- Low Friction and Low Wear – increases part life and results in less down time.
- Cost effective – overall very economical to produce.
- Self-lubricating properties. This saves costs eliminating the use of lubrication fluids. External lubrication also causes problems with dust and grease build-up.
- Resistant to environmental decay – will not rot, swell, splinter or degrade.
- Very little soil adherence compared to metal counterparts.

COMBINE HARVESTER PARTS - Skid plates, Auger, Auger trough liners, Auger bed liners, Retractable Fingers

NATIONAL DISTRIBUTION - STOCK SHAPES 086 1100 420

TILLAGE - Ripper shins and shank guards

MOLD BOARD COVERS - Less friction against steel and helps to reduce mud build up.

STUBBLE STOPPERS - Slides in front of the wheels and helps to prevent tyre damage on stubble post harvesting.

PLANTERS - Depth control wheels and scrapers.

NO TILL PLANTERS - Most of the parts listed on this can be found on these planters.

The high cost of farming equipment means farmers use combination planters.

HAY MAKING

POULTRY ABATTOIR
